Jubilee Wharf

Jubilee Wharf is a significant breakthrough in ecological and sustainable energy that could lead the way for future developments.

Projektová fakta:

Location

Cornwall, United Kingdom

Dokončení

2007

Typ budovy

Komerční objekty

Product systems

Plošné vytápění a chlazení, PE-Xa
připojení otopných těles a instalace
rozvodů vody

Typ projektu

Novostavba

Partneři

developer

Andrew Marston, Robotmother
Developments

architect

Bill Dunster Architects

installer

Project Heating

Once again Uponor Ltd has found itself at the forefront of sustainable technology, this time at the impressive Jubilee Wharf in Cornwall. The £3m project is the creation of Bill Dunster Architects, renowned for uniquely designed, environmentally friendly buildings. The whole project, built by Midas Construction, will cover 1,800 square meters incorporating wood pellet boilers, solar powered water heating system, a passive ventilation system and four wind turbines to generate its own electricity.

The project has caused quite a stir in the West Country, but either love it or hate it Jubilee Wharf is a significant breakthrough in ecological and sustainable energy that could lead the way for future developments.

All the main construction materials were obtained from recyclable sources with the aim of making the building completely carbon neutral. 'Project Heating' installed a combination of Uponor's flexible PEX (polyethylene cross linked) and MLC (Multi-Layer Composite) pipe to supply heating and water to all of the development's 12 workshops, 6 flats, offices, nursery, café and yoga studio. It was important that the pipework supplied was versatile to meet BBA and WRAS approval, and could be used in a number of difficult applications throughout the project.
