Technical data

Material PEX Product information and application use

Uponor ProPEX® rings are required to make a proper ProPEX connection. The ProPEX ring with stop includes a leading edge chamfer and stop edge.

Note: Temperature and pressure ratings stated are hydrostatic ratings. For domestic hot-water (DHW) and DHW recirculation installations, operating conditions should not exceed 140°F (60°C) at 80 psi (5.5 bar) in accordance with ASTM F2023. For additional information regarding application-specific temperature and pressure ratings, refer to the Uponor PEX Piping Systems Design and Installation Manual.

Notes

Degree of crosslinking: 70% to 89%

Design and Installation Guide.

Square cut the Uponor PEX tubing. Remove excess material. Slide the ProPEX ring over the end of

the tubing (maximum 1 /16" overhang for rings without stop). When using the ProPEX ring with stop,

slide the ring on the tubing with the chamfered edge first until the end of the tubing contacts the stop

edge. Expand the tubing and ring. If using the ProPEX Manual Expander Tool, rotate the tool a quarter turn after each expansion to prevent the formation of grooves. Remove the expansion tool

and fully seat the tubing and ring against the shoulder of the fitting. Make ProPEX connections at

temperatures above 5°F/-15°C. For more information, refer to the Uponor PEX Piping Systems
