

The image shows a close-up of a heavy-duty decoiler machine. The machine features a blue frame and two prominent red rollers. A large coil of black corrugated pipe is being processed by the machine. The background is filled with the repeating pattern of the corrugated pipe. The Uponor logo is visible in the top right corner.

# Ecoflex Decoiler

Heavy-duty decoiling device for pipe installation via crane or excavator

- Safe decoiling of large and heavy coils with three-sided guide rollers
- Robust construction of coated steel
- Easy handling when loading, mounting and decoiling
- Load capacity up to 650 kg

# Heavy weights are safely hooked

## Easy decoiling of heavy coils

Uponor has developed the Ecoflex decoiling device to simplify installation from the coil. It is inserted into the Ecoflex coil and then attached with chains or belts, for example, to the excavator bucket. The coil can now be easily transported to the construction site and installed in the trench with little effort.

*Solid holders and the roller guide with three sides ensure maximum safety when laying heavy Ecoflex coils up to 650 kg.*

*Practice-oriented handling. Existing construction site equipment such as excavators or cranes can be used for installation.*

## Your benefits:

- Existing construction site equipment such as an excavator or crane can be used for pipe installation
- The Ecoflex decoiler is also suitable for unloading the coils from trucks
- Less contamination of the pipes during installation
- High installation safety due to reliable coil attachment and pipe guidance

## Ecoflex Decoiler Technical Data

Item-No.	1036645
Construction	Coated steel construction
Width, approx. [cm]	240
Height, approx. [cm]	105
Depth, approx. [cm]	10
Net weight, approx. [kg]	90
Load capacity, max. [kg]	650

*Even the installation of large pipe lengths of up to 200 m is child's play with the Ecoflex decoiler.*
