Four improvements
for your home

Uponor Smatrix for radiant heating and cooling

Your key to more efficiency

Choose the smartest way to control your home's energy and costs

Are you conscious about your energy consumption at home and want to save costs? Then choose Uponor Smatrix. This fully integrated control system for radiant heating and cooling perfectly fits your life. Its innovative Autobalancing technology constantly anticipates and adjusts the exact amount of energy your home needs to give you optimal comfort at all times. Best of all: Smatrix is easy to install, easy to use and easy to control – even when you are not at home.

Uponor Smatrix

How Uponor Smatrix improves your home

1. It saves up to 20%* in energy – automatically

Unlike conventional systems, Smatrix' Autobalancing constantly monitors changes in temperature for each individual room in your home. It automatically adjusts the heating or cooling. The result: you save up to 20%* in energy, which is friendly on both the environment and your household budget.

2. It fits to your existing radiant system

You don't need to build a new house to use Smatrix. It can also be retrofitted in existing radiant heating and cooling systems for your renovation project. Regardless of the existing system, Smatrix allows you to improve the performance of your overall system easily and instantly.

3. It lets you easily control the system

With Smatrix Wave , you can enjoy a user-friendly touch-screen interface that makes controlling Smatrix a pleasure. Smatrix can also be controlled via mobile devices or PC with the Smatrix app. If you're away for longer, you can save even more energy and money by switching the heating to the "Away" or "Eco" mode.

4. It is an intelligent system that's quiet and simple

With its built-in functions and virtually no need for wiring, Smatrix is easy to install, set up and maintain. And it is almost invisible. Autobalancing technology is continuously "learning" in order to optimise itself and completely works on its own, so you don't need to constantly change settings. All you have to do is to enjoy more comfort.

Uponor Smatrix

* Energy savings of up to 6% (compared to thermostat radiator systems), 12% (compared to systems without Autobalancing) or 20% (compared to systems without Autobalancing and thermostat radiators)
