# ETIM Classification for Uponor Products

## Situation

- ETIM is an independent, European classification standard for building products. Product classes and product features are described by a set of identification codes enabling customers to select and compare products quickly across complex manufacturer portfolios. Initiated for electrical products, standardization for HVAC and plumbing is ongoing.
- Due to easy and flawless product selection demand from customers (wholesale, planners, contractors) for ETIM classified product data is growing.
- It is required for Uponor to implement the ETIM classification to meet customer demand in different sales channels

## Implementation

- ETIM classification will be implemented for all Uponor items (classes and features)
- Ownership for ETIM is assigned to PDC / Wojciech Rokicki
- Uponor will sign for ETIM membership in Germany to be able to influence ongoing work on classification schemes for Uponor product groups
- Local ETIM classifications will be consolidated by PDC and completed in separate database for upload to Windchill at a later stage

# What is ETIM

- ETIM - European Technical Information Model
- ETIM is a **systematic classification** for products related to electric, HVAC and plumbing market
- Based on ETIM each product is getting **CLASS NUMBER and related set of technical attributes** describing product type and allows to recognize what exactly type of product it is.
- The same products from different manufacturers are described in the same way using the same attributes.

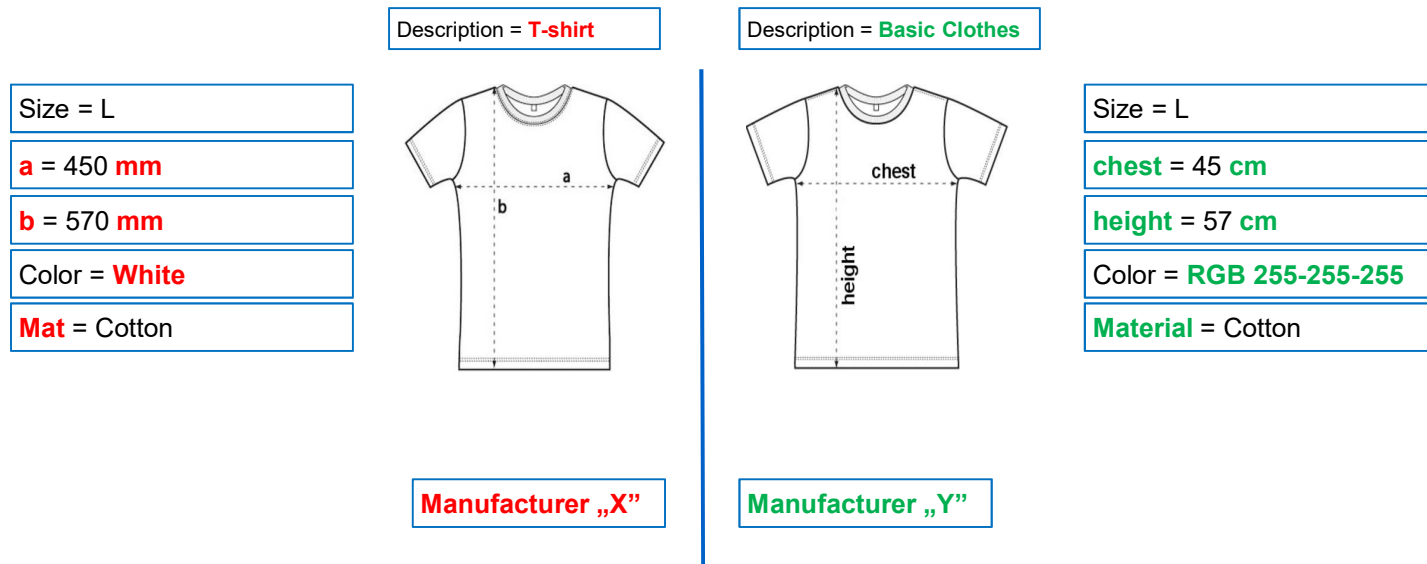

# What ETIM is not

- ETIM is not a Software Application
- ETIM is not a Database
- ETIM is not a Product Browser
- ETIM is not a Catalogue of Products

# What is ETIM

- Currently manufacturers are describing products using their own rules. They are presenting different attributes, which have different names and use different units of measure, even if it is the same product.

Simple example basing on t-shirts:

# What is ETIM

- ETIM is giving a standard which can be used by all manufactures on the market
- Standard allows to describe the same or similar type of products with the same attributes for all manufacturers.

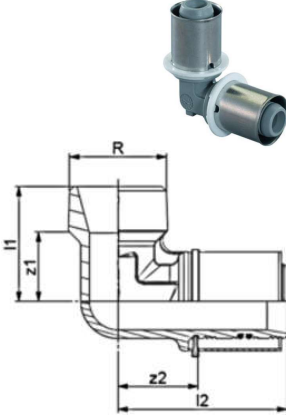

- It cause easy browsing, comparing and exchanging information (attributes) for customers and **reduce time** of reaching all needed information of products

# What is ETIM

- ETIM is building **common language** for whole HVAC and plumbing industry. Below example of ETIM based on real plumbing products attributes:

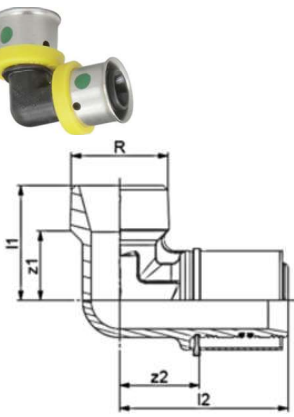

Class = Fitting with 2 connections
Group = Fittings, flanges and connectors
Size = 25x2.25 mm
Material = Brass
Angle = 90
Max op. pressure = 10bar
R = 25 mm
WallThickness = 2.25 mm
I1 = 125 mm
I2 = 130 mm
z1 = 85 mm
z2 = 92 mm
Etc.....

The same tech drawing

Manufacturer „X”

Class = Fitting with 2 connections
Group = Fittings, flanges and connectors
Size = 25x2.25 mm
Material = Brass
Angle = 90
Max op. pressure = 6bar
R = 25 mm
WallThickness = 2.25 mm
I1 = 130 mm
I2 = 130 mm
z1 = 90 mm
z2 = 94 mm
Etc.....

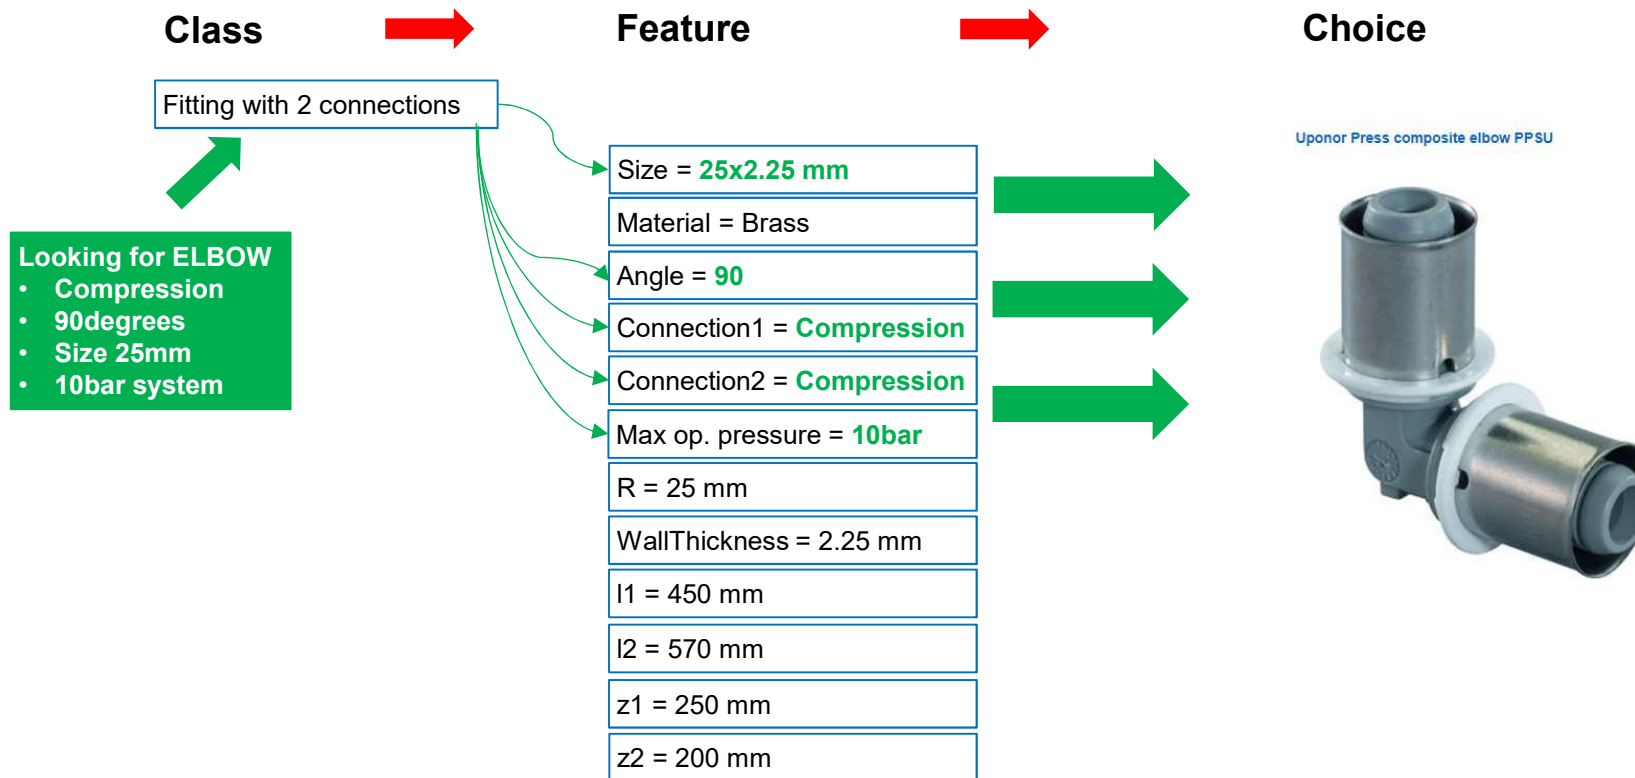

The same tech drawing

Manufacturer „Y”

# What is ETIM

- Allows easy browsing and finding products for customers

# ETIM Classification for Uponor Products ISO16757

September 2015

	DIN ISO 16757-1	
ICS 91.010.01	<b>Data structures for electronic product catalogues for building services – Part 1: Concepts, architecture and model (ISO 16757-1:2015), English translation of DIN ISO 16757-1:2015-09</b>	

ISO 16757 consists of the following parts, under the general title *Data structures for electronic building services product catalogues*:

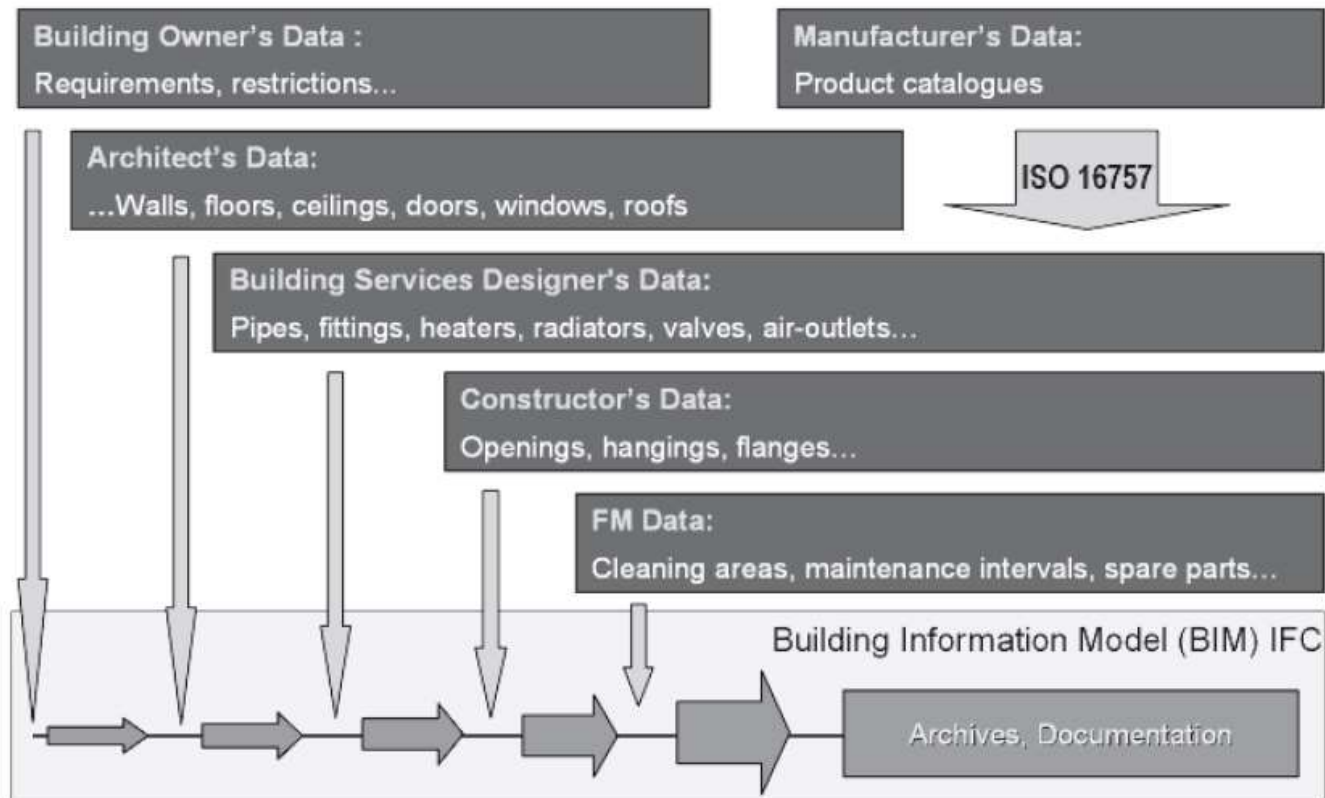

- *Part 1: Concepts, architecture and model*
- *Part 2: Geometry*

The following parts are planned:

- *Part 3: Script language and functions*
- *Part 4: Cooperation with building information modelling standards*
- *Part 5: Product catalogue exchange format*

# ETIM Classification for Uponor Products- ISO 16757

torad, transferred or otherwise distributed to third parties, outside the Uponor Group. Non-compliance will be authoritative.  
Dieses Dokument darf nicht gespeichert, weitergeleitet oder anderweitig an Dritte außerhalb des Uponor-Konzerns erson; gespeichert in der Standards Database ist die maßgebliche und gültige Fassung.

# ETIM Impact on UPONOR Business

It is recommended for Uponor to implement the ETIM classification to meet customer demand in different channels
